

# Clinical Priorities Workgroup

May 12, 2008

# Quality reporting

- Statewide quality standards
- Locus of aggregation
- Key data elements/specifications
- CDS across care settings
- Intersection with medication management
- Physician adoption/trust

# New Yorkers and Clinician

- PHR and medication management crossover
- Emergency services and coordination (DNR)
- Patient education and decision support
- Patient identification and consent
- Current PHR product readiness
- Continuity of care record with the personal health record
- Secure patient-clinician clinician-clinician interaction
- Additional patient data sources

# Public Health

- Integrating current public health data sources – coordinated input
- High priority to deal with projects already out
- Bi-directional data flow through the Universal Public Health Node
- Access to public programs as an issue for public health
- Coordination with other efforts – CDC and NHIN

# Medicaid Medication Mgmt

- Reconciliation relies on cross-continuum data
- Coordination with NHIN projects
- Promote e-prescribing in context of advancement to a full EHR with CDS
- Prioritization of clinical needs for financial incentive models
